In the Claims

Please amend Claims 1, 2 and 12, and add new Claims 13-20 as shown in the following listing.

1. (Currently Amended). A fitting for releasably connecting a first tube end to a second tube end 1 2 in a substantially coaxial, end-to-end orientation, wherein said second tube end has an outer diameter within a specified range, said fitting comprises: 3 a slightly resilient collar having a plurality of inwardly projecting prominences; 4 said first tube end having a sidewall and a plurality of holes therethrough; 5 said holes sized, shaped and located to allow passage of said prominences therethrough to 6 7 contact an outer surface of said second tube end; wherein said collar has a medial bulge in thickness yielding an axially variable resiliency. 8 2. (Currently Amended). The fitting of Claim 1, A fitting for releasably connecting a first tube end 1 to a second tube end in a substantially coaxial, end-to-end orientation, wherein said second tube end 2 has an outer diameter within a specified range, said fitting comprises: 3 a slightly resilient collar having a plurality of inwardly projecting prominences; 4 said first tube end having a sidewall and a plurality of holes therethrough; 5 said holes sized, shaped and located to allow passage of said prominences therethrough to 6 7 contact an outer surface of said second tube end; wherein said collar has an axially variable resiliency; and, 8 wherein a first one of said prominences is shaped to have a tapered inner surface. 9

- 3. (Previously Presented). A fitting for releasably connecting a first tube end to a second tube end
- 2 in a substantially coaxial, end-to-end orientation, wherein said second tube end has an outer diameter
- 3 within a specified range, said fitting comprises:
- 4 a resilient clamping structure having a plurality of inwardly projecting prominences;
- said first tube end having a sidewall and a plurality of holes therethrough;
- said holes sized, shaped and located to allow passage of said prominences therethrough to
- 7 contact an outer surface of said second tube end;
- 8 wherein a first one of said prominences is shaped to have a tapered inner surface; and
- 9 said tapered inner surface has an upper portion and an adjacent lower portion wherein said
- upper portion is more outwardly located than said lower portion.
- 4. (Original). The fitting of Claim 1, wherein said clamping structure further comprises a
- 2 sleeve-shaped body.
- 5. (Original). The fitting of Claim 1, wherein said prominences are evenly spaced apart.
- 6. (Canceled).
- 7. (Original). The fitting of Claim 1, wherein there are at least six prominences.
- 8. (Original). The fitting of Claim 1, wherein said clamping structure is axially symmetric.

- 9. (Previously Presented). The fitting of Claim 2, wherein said clamping structure is formed from
- an integrated collar made from a resilient material.
- 1 10. (Original). The fitting of Claim 1, wherein said prominences are biased radially inwardly.
- 1 11. (Canceled).
- 1 12. (Currently Amended). An auto-adapting fitting for releasably connecting in a substantially
- 2 coaxial, end-to-end orientation, a first tube end to a second tube end where said second tube end has
- an outer diameter within a specified range, said fitting comprises:
- 4 a tubular feed port having a first axial opening;
- 5 said port being shaped to have a plurality of apertures extending radially through said
- 6 side wall proximate to said opening; and
- 7 a slightly resilient annular retaining ring circumferentially mounted to said outer wall,
- 8 said ring having a plurality of friction prominences penetrating through said aperture into said port;
- 9 wherein each of said prominences comprises an axially medial hump said ring has
- a medial bulge in thickness yielding an axially variable resiliency.
- 1 13. (New). The fitting of Claim 2, wherein said prominences are evenly spaced apart.
- 1 14. (New). The fitting of Claim 2, wherein there are at least six prominences.

- 1 15. (New). The fitting of Claim 2, wherein said collar is axially symmetric.
- 1 16. (New). The fitting of Claim 2, wherein said prominences are biased radially inwardly.
- 1 17. (New). The fitting of Claim 12, wherein said prominences are evenly spaced apart.
- 1 18. (New). The fitting of Claim 12, wherein there are at least six prominences.
- 1 19. (New). The fitting of Claim 12, wherein said ring is axially symmetric.
- 1 20. (New). The fitting of Claim 12, wherein said prominences are biased radially inwardly.
